Conservation Enterprises Impact Lab Final Session

September 5, 2024

Change Your Name in Zoom

Please change your name in Zoom so that it reads “**Name, Country**”

For example: “Ashleigh, United States” or “Percy, Peru”

Using Interpretation in Zoom

How to start Language Interpretation:

1. In your meeting/webinar controls, click **Interpretation**. 
2. Click the language you would like to hear (Spanish or French).
3. (Optional) To hear the interpreted language only, click **Mute Original Audio**.

If you would like Zoom translations, keep in mind the following requirements:

1. You must join the meeting audio through your computer audio. You cannot listen to language interpretation if you use the dial-in or call me phone audio features.
2. As a participant joining a language channel, you can broadcast back into the main audio channel if you unmute your audio and speak.

Cómo usar la interpretación de Zoom

Cómo iniciar la Interpretación de Idiomas:

1. En los controles de la reunión o el seminario web, haga clic en **Interpretación**. 
2. Haga clic en el idioma que desee escuchar.
3. (Opcional) Para escuchar solo el idioma interpretado, haga clic en **Silenciar audio original**.

Si desea traducciones de Zoom, tenga en cuenta los siguientes requisitos:

1. Debe unirse al audio de la reunión a través de audio/VoIP del equipo. No puede escuchar la interpretación de idiomas si utiliza las funciones de audio de teléfono marcar o recibir llamada.
2. Como participante que se une a un canal de idioma, puede transmitir de nuevo en el canal de audio principal si reactiva el audio y habla.

Comment utiliser l'interprétation en Zoom

Comment démarrer l'interprétation linguistique:

1. Dans les contrôles de votre réunion/webinaire, cliquez sur **Interprétation**. 
2. Cliquez sur la langue que vous souhaitez entendre.
3. (Optionnel) Pour entendre uniquement la langue interprétée, cliquez sur **Couper la version audio originale**.

Si vous souhaitez des traductions Zoom, gardez à l'esprit les exigences suivantes:

1. Vous devez rejoindre l'audio de la réunion via l'audio de votre ordinateur. Vous ne pouvez pas écouter l'interprétation linguistique si vous utilisez les fonctions audio d'appel entrant ou appelez-moi.
2. En tant que participant rejoignant un canal de langue, vous pouvez rediffuser sur le canal audio principal si vous activez le son et parlez.

Trivia Question 1: What country is the largest producer of coffee in the world?

A. Colombia

B. Ethiopia

C. Brazil

D. Vietnam

Trivia Question 2: What part of the vanilla plant is used to produce vanilla extract?

A. Leaves

B. Pods 

C. Flowers

D. Roots

Final Session Objectives

Showcase teams' lessons learned to strengthen understanding and application of successful CE approaches

Provide a platform for teams to explore current challenges and share solutions

Motivate and encourage teams to continue measuring and sharing the impact of their CE approaches

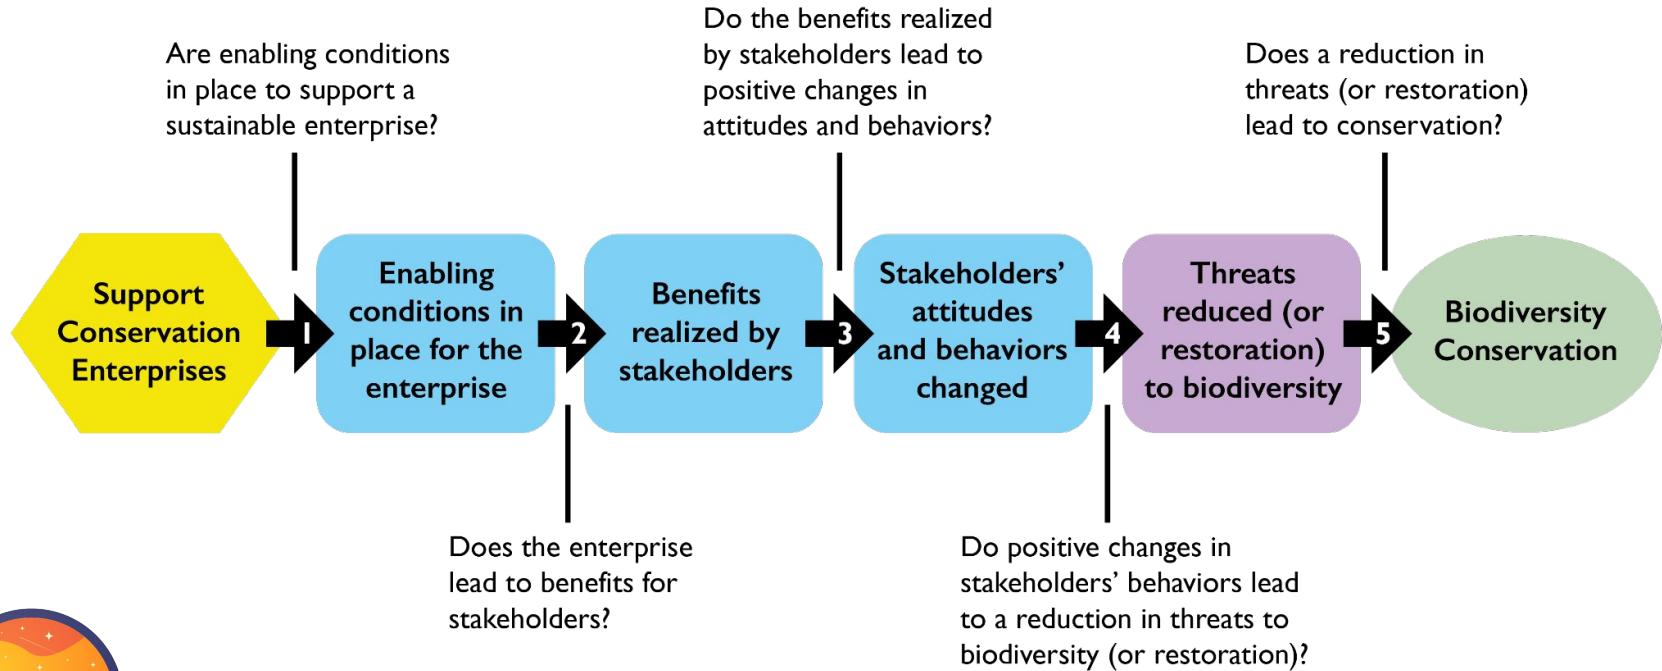

Lab Purpose

Strengthen knowledge, skills and abilities through **peer-to-peer learning** to **improve effectiveness** of conservation enterprise approaches.

USAID's Conservation Enterprises Theory of Change

Journey Map

This Year's Teams

LAC

Colombia

Ecuador

CAM: El Salvador,
Guatemala, Honduras

AFRICA

Madagascar

Tanzania

ASIA

Cambodia

Vietnam

This Year's Teams

[Cambodia](#)

USAID Conserve Activity: Identifying the right combination of benefits and forest-based or freshwater fisheries livelihoods to promote conservation and livelihoods security.

[Vietnam](#)

Sustainable Forest Management Project: Supporting communities to receive fair prices for forest products and enterprises to source sustainably.

[Madagascar](#)

Riake: Linking remote villages with markets and integrating the private sector along fisheries, aquaculture, and agroforestry value chains.

[Tanzania](#)

Tuhifadhi Maliasili: Supporting financial inclusion, market linkages, and access to protected areas for sustainable honey and mushroom producers.

[Colombia](#)

Productive Nature Activity: Strengthening business model using nature-based solutions with cacao producers and national companies.

[Ecuador](#)

Sustainable Activities for Conservation of a Healthy Amazon (SACHA): Increasing income for Indigenous communities through sustainable livelihoods by supporting sustainable agroforestry, traditional chakra practices, and market linkages.

[Ecuador](#)

Sustainable Environment and Livelihoods for a Vital Amazon (SELVA): Linking sustainable land management with a gastronomy model based on culturally important crops and traditional dishes.

[Ecuador](#)

Habla Tiburón Activity: Supporting fishers and sustainable seafood entrepreneurs to strengthen sustainable seafood value chains.

[Central America Regional \(CAM\): El Salvador, Guatemala, Honduras](#)

Regional Coastal Biodiversity Project: Strengthening sustainable mangrove honey, ecotourism, and fisheries value chains through savings groups, associations, and participatory monitoring and evidence generation.

Team Lightning Talks

- Each team will have 3 minutes to:
 - Introduce themselves and summarize their enterprise(s)
 - Share one key lesson or success
 - Share one key challenge
- Topics teams would like to discuss further will be addressed during breakout group sessions

VIETNAM: *SUSTAINABLE FOREST MANAGEMENT*

ENTERPRISE OVERVIEW: Purchasing, processing, and trading of rattan materials for domestic and export markets.

KEY LESSON: Rattan harvesters are more likely to implement sustainable practices when they have the necessary capacity. Buyers such as Luc Dong adopt biodiversity conservation-friendly standards and criteria when they have better revenue and market access, including international markets.

KEY CHALLENGE: Insufficient law enforcement hinders efforts to exclude unsustainable harvest practices and prevent the illegal transportation of rattan raw material from entering the supply chain.

Team Folder

CAMBODIA: *USAID CONSERVE*

ENTERPRISE OVERVIEW: Community-based organization enterprises, including: Community-Based Ecotourism (CBET), agriculture, Non-Timber Forest Products, and aquaculture processing.

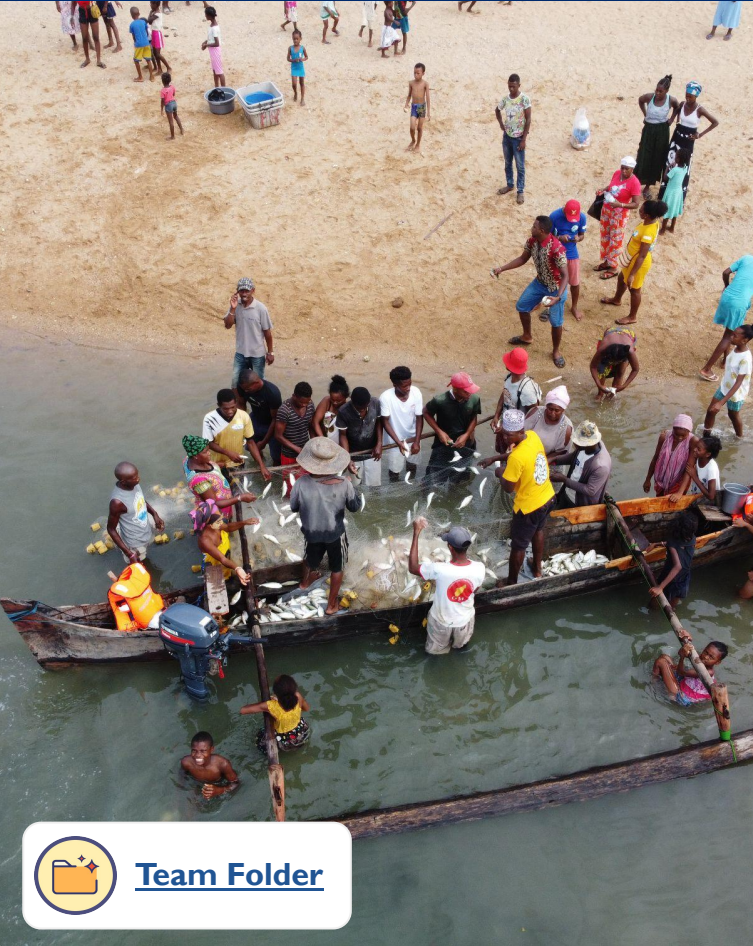

KEY LESSONS: CBET can simultaneously boost community income and support conservation activities (e.g., through agreements for contributions). It is beneficial to consider a range of local markets (3-5 per community) rather than solely focusing on niche international markets.

KEY CHALLENGE: Developing capacity and establishing market linkages, including promotion and access to markets.

[Team Folder](#)

MADAGASCAR: RIAKE

ENTERPRISE OVERVIEW: Small-scale fisheries value chains, women's associations' small business, ecotourism, seaweed farming, crab farming with mangrove restoration, cacao, honey, and other agroforestry.

KEY LESSON: Focus on reducing costs for actors along the value chain rather than increasing product prices. This approach yields better returns for communities and encourages greater engagement from the private sector.

KEY CHALLENGE: Ensuring the right people are in the discussion and maintaining the agreement on shifting pricing norms. There is a challenge with maintaining respect for the pricing agreement for quality products.

Team Folder

ECUADOR: *HABLA TIBURÓN*

RESUMEN DEL EMPRENDIMIENTO(S): Trabajar con asociaciones de pescadores y una comunidad de Emprendimientos de alimentos del mar sostenibles para fomentar una cadena de valor de alimentos del mar basada en prácticas sostenibles, incluyendo el uso de artes de pesca con menos captura incidental de tiburones.

UN EXITO/ LECCION CLAVE: Analizar el impacto que generan los emprendimientos, en torno al enfoque de 4 Retornos (natural, ambiental, social y financiero), ha permitido que los mismos emprendedores/as sean conscientes de impactos que antes no tenían visualizados, y que ahora enriquecen su propuesta de valor, y los empodera como generadores de cambio (ej..Atún Sin Lata, Galápagos).

UN DESAFÍO CLAVE: Hemos probado la factibilidad del sistema de trazabilidad para la pesca artesanal en la Reserva Marina de Galápagos, pero encontrar o desarrollar un mercado que pague más por una pesca que puede demostrar su origen y prácticas sostenibles, aún es un desafío.

Team Folder

ECUADOR: *HABLA TIBURÓN*

ENTERPRISE OVERVIEW: Work with fishermen's associations and a community of Sustainable Seafood Enterprises to foster a seafood value chain that emphasizes sustainable practices, including fishing gear that reduces shark bycatch.

KEY LESSON: Using the 4 Returns approach (natural, environmental, social, and financial) to analyze impact has helped entrepreneurs recognize previously unconsidered effects. This awareness enhances their value proposition and empowers them as agents of change (e.g., Canned Tuna, Galapagos).

KEY CHALLENGE: While we've tested the feasibility of a traceability system for artisanal fishing in the Galapagos Marine Reserve, finding or developing a market willing to pay a premium for fishery products demonstrating origin and sustainability remains a challenge.

[Team Folder](#)

ECUADOR: SACHA

RESUMEN DEL EMPRENDIMIENTO(S): Empresas vinculadas con el cacao, bambú y otras opciones que dependerá de los resultados del análisis sobre los primeros acercamientos con las comunidades.

UN EXITO/ LECCION CLAVE: La creación y desarrollo de emprendimientos de conservación deben ser procesos a largo plazo, auténticos y participativos desde las bases y que promuevan la conformación de organizaciones productivas al margen de los asuntos políticos.

UN DESAFÍO CLAVE: Un verdadero empoderamiento y liderazgo de la organización productiva así como de la cadena de valor.

[Team Folder](#)

ECUADOR: SACHA

ENTERPRISE OVERVIEW: Companies involved with cocoa, bamboo, and other products, with initiatives depending on initial community engagement analysis.

KEY LESSON: Successful conservation ventures require long-term, authentic, and participatory processes from the grassroots level, fostering the development of productive organizations independent of political issues.

KEY CHALLENGE: Achieving genuine empowerment and leadership within productive organization and across the value chain.

[Team Folder](#)

ECUADOR: SELVA

RESUMEN DEL EMPRENDIMIENTO(S): Apoyar medios de vida sostenibles y rentables con comunidades amazónicas usando un modelo gastronómico que dinamice la economía y rescata sabores ancestrales de las poblaciones indígenas y comunidades basado en acuerdos de conservación, asistencia técnica, compra de materia prima, escuela de chefs para los jóvenes y venta/comercialización gourmet de platos de cocina.

UN EXITO/ LECCION CLAVE: Hemos visto la importancia de analizar las condiciones de contexto favorables para el desarrollo de las iniciativas económicas. En nuestro caso del modelo gastronómico se ha identificado que existe un potencial mercado que podemos aprovechar.

UN DESAFÍO CLAVE: Hemos identificado que al trabajar con pueblos indígenas un reto es fortalecer las capacidades para generar un estándar de calidad en los productos y servicios que se piensan desarrollar con el modelo gastronómico.

Team Folder

ECUADOR: SELVA

ENTERPRISE OVERVIEW: Supporting sustainable and profitable livelihoods for Amazonian communities through a gastronomic model that boosts the economy, revives ancestral flavors, and includes conservation agreements, technical assistance, raw materials purchase, a culinary school for youth, and gourmet sales and marketing.

KEY LESSON: Analyzing favorable context conditions is crucial for developing economic initiatives. In our gastronomic model, we've identified a potential market we can leverage.

KEY CHALLENGE: Strengthening the capacity of Indigenous communities to maintain high-quality standards in products and services within the gastronomic model.

EL SALVADOR / CAM: REGIONAL COASTAL

BIODIVERSITY PROJECT

RESUMEN DEL EMPRENDIMIENTO(S): 26 proyectos emprendedores en ecoturismo, apicultura vinculados a los manglares, y pesca, incluyendo una tienda para los pescadores que fomenta buenas prácticas como uso de aperos de pesca legales.

UN EXITO/ LECCION CLAVE: Vinculando la generación de evidencia científica, espacios de gobernanza y apoyo técnico-económico, se logra un cambio de actitud hacia la adopción de buenas prácticas sociales, ambientales y empresariales.

UN DESAFÍO: Débil asociatividad dentro de los grupos que participaron, y carencia de manejo de procesos administrativos y de comercialización.

Team Folder

EL SALVADOR / CAM: REGIONAL COASTAL BIODIVERSITY PROJECT

ENTERPRISE OVERVIEW: Twenty-six entrepreneurial projects in ecotourism, beekeeping linked to mangroves, and fishing, including a store for fishermen promoting best practices such as the use of legal fishing tools

KEY LESSON: Combining scientific evidence, governance spaces, and technical-economic support fosters a positive shift toward adopting good social, environmental, and business practices.

KEY CHALLENGE: Weak associativity within participating groups and insufficient management of administrative and marketing processes.

[Team Folder](#)

COLOMBIA: NATURALEZA PRODUCTIVA

RESUMEN DEL EMPRENDIMIENTO(S): Incidir positivamente en los modelos de negocio de empresas nacionales como Nutresa y en asociaciones de productores a través de la implementación de [Soluciones Basadas en la Naturaleza \(SbN\)](#) en diversas cadenas de valor de sectores como el cosmético, energía y agrícola, como el cacao.

EXITO CLAVE: Promover la relación entre empresa ancla, las empresas de conservación (asociaciones de productores) y las familias productoras, alrededor de los esfuerzos de conservación en ecosistemas estratégicos, a través de acciones a lo largo de la cadena de valor que generen beneficios para los ecosistemas y las familias productoras.

DESAFÍO CLAVE: Lograr que las empresas ancla y las asociaciones de productores establezcan acuerdos de largo plazo que incorporen compromisos de compra y de implementación de Soluciones basadas en Naturaleza para conservar la biodiversidad.

COLOMBIA: NATURALEZA PRODUCTIVA

ENTERPRISE OVERVIEW: Enhance the business models of national companies like Nutresa and producer associations by implementing [Nature-Based Solutions \(NBS\)](#) across various value chains in sectors such as cosmetics, energy, and agriculture, including cocoa.

KEY LESSON: Strengthening relationships between anchor companies, conservation organizations (such as producer associations), and producer families around conservation efforts leads to beneficial actions throughout the value chain, positively impacting both ecosystems and producing families.

KEY CHALLENGE: Securing long-term agreements from anchor companies and producer associations to purchase and implement Nature-based Solutions for biodiversity conservation.

[Team Folder](#)

Small Group Discussions

Form Groups. Self-select into small groups based on your interest in the topics listed below:

- **Group 1 (plenary room):** Fostering the right market for the product and the community
- **Group 2 (breakout room):** Relationships along the value chain (and beyond!)
- **Group 3 (breakout room):** Capturing and communicating the links between biodiversity and conservation enterprise success

Discussion. Share insights, ask questions, and explore challenges, solutions, and relevant examples related to your topic.

Report Out. Your group facilitator will present a brief summary of your group's discussion.

Small Group Discussions

1. Fostering the right market for the product and the community	2. Relationships along the value chain (and beyond!)	3. Capturing and communicating the links between biodiversity and conservation enterprise success
● Establishing and ensuring markets for products ● Building capacity to meet market requirements ● Prioritizing local and national markets over international ones ● Working with remote communities	● Engaging stakeholders throughout the value chain ● Strengthening relationships between private sector actors and producer associations ● Understanding the impact of external actors (e.g., enforcement) on the enterprise	● Understanding and demonstrating the connection between biodiversity status and enterprise success ● Generating evidence to show how biodiversity impacts the enterprise (e.g., fish stock surveys) ● Developing strategies to shift norms and mindsets

Group I: Fostering the right market for the product and the community

Important to ensure the product has an existing market, market studies (locally)

Establish Fair pricing mechanism - example of octopus value chain - establishing trust between private sector and communities

Premium prices for communities & products – that's not always the best incentive. Frequency, capacity building from PS, & other incentives can help establish a better commercial relationship/market access

Support producers to improve quality of product

Supportive ecosystem for people to sell their products e.g. transportation

Ibis rice example of premium prices being offered successfully

What are the local products/resources already and what can we do (ex. capacity) to support them to meet markets demands

Supporting community capacity to manage their own processes & financial understanding and business plans & to advocate for themselves

Certification is not always practical – monopolies can interfere (linked to remoteness of villages)

Collection centers as an option for communities to bring products to one place for buyers to purchase

Private sector reinvest in the producers/harvesters to ensure sustainability

Transportation is a big issue with remote communities, prices are lower (buyers pay less)

I. Fostering the right market for the product and the community

- Establishing and ensuring markets for products
- Building capacity to meet market requirements
- Prioritizing local and national markets over international ones
- Working with remote communities

Group 2: Relationships along the value chain (and beyond!)

Madagascar value chain negotiation: ask fishers what are the priority specific for them for living and eating in village. We bring data from focus group to the collectors. Should include all actors in chain. Are these also the priority species for collectors? what is a quality fish for them, about weight, color. We transfer this criteria (local norm). Helps fishers target the local market. This enables fisher to get a better price.
Also build up text service to share prices among actors in value chain. Innovating communicated between remote people.

Ecuador: natural, environmental, social, financial impact. Work with fishers to identify their needs. Need to know context and needs of different stakeholders. How to work with fishers on their fishing tools. Trying to create a community platform for entrepreneurs to make links between private sector and fishing communities. To connect them to know what both stakeholders want Most fisheries must take loans from intermediaries. Generates debt..

Ecuador: SELVA. align Indigenous communities with dynamics of private companies. Change them to a market logic

Cambodia: fisherfolk often don't have capital, so they borrow. And end up having to sell to those folks they borrowed from at a low price.

Cambodia: Community savings groups as a potential solution to the borrowing from intermediaries. Not currently part of their implementation approach.

HT: Between Island and continent, very different contexts, some dangerous contexts. Fisherfolks challenged by not having strong representation. As a result fisherhold receive low income.

Madagascar: challenge of remote contexts. How to build value for remote communities with low infrastructure.

Cambodia: remoteness also challenging for relationship building. Hard for fishermen to get fish to shore to sell. Transport price sometimes more than price they get. So they end up just selling to middle men. Also competing with illegal trawlers.

In Ecuador, fishers cooperatives or associations, but there are challenges.

In Madagascar do implement savings groups. yes.

Group 3: Capturing and communicating the links between biodiversity and conservation enterprise success

We need a long time to show biodiversity conservation change, like 5-7 years (CAM)

Colombia PNA noted a pilot activity to understand attitudes toward biodiversity, and barriers, to understand the relationship –quantitative and qualitative

In El Salvador, they used outcome mapping to support communities to measure change—it considers all sources of change

In Colombia, in 18 months, we are trying to show Nature Based Solutions—biodiversity, land, and water changes in the corridors. Also business aspects (price, productivity, quality, inputs), and also governance aspects

In Vietnam, the SFM activity works with community patrols to monitor forest change, and to capture and communicate attitude and behavior change

Matt noted the need to connect with organizations that will be there for the long term—to measure biodiversity change

Matt noted the continued need to quantify the monetary benefits

NbS have to be profitable and sustainable, so including the cost of monitoring biodiversity can be included as a core business cost—connected to their productivity and to demonstrate positive impact.

Next Steps

- Finalize team sessions, workbooks, and posters.
- Posters will be shared once complete.
- Each participating team will receive a certification of completion.
- Share your feedback!
- Let's take a photo!
